Risk and reward profile

Lower Risk — Higher Risk

Potentially lower reward — Potentially higher reward

1	2	3	4	5	6	**7**

The calculation of the risk and reward indicator is based on 5 years of historical (actual or simulated) information so may not be a reliable indication of the future risk profile of the Fund.

The risk and rewards indicator of the Fund is not guaranteed and may change over time.

The risk and reward profile is classified by the level of historical fluctuation (i.e. volatility) of the Net Asset Values of the Class, and within this classification, categories 1-2 indicate a low level of historical fluctuations, 3-5 a medium level and 6-7 a high level.

A category 1 fund is not a risk-free investment – the risk of losing your money is small, but the chances of making gains is also limited.

The risk category does not take into account the following material risks:

Commodity Risk: As the Fund invests in securities with exposure to a commodity, or use derivatives to track the price of the underlying commodity (ETCs), it is considered to be high risk which may result in fluctuations in the value of your investment.

Market Risk: As a result of market movements, the value of shares and the income derived from them can go down as well as up. As a result, there can be no assurance that any appreciation in the value of the investments will occur.

Equity Risk: Whilst equity investments carry potential for attractive returns over the longer term, the volatility of these returns can also be relatively high.

Collective Investment Scheme risk: The Fund may invest in other collective investment schemes and as such a Fund will bear its portion of the expenses of the other collective investment scheme, including management, performance and/or other fees.

For full details of all the risks that could affect the Fund, please refer to the Prospectus.
